

Civil Engineer

Chase your passions and pursue the projects that interest you

If you enjoy business development but also want to work directly on rewarding engineering projects, this role with Pilch Engineering in beautiful Sheridan, WY, is your opportunity. This established civil engineering and geology firm is poised for growth and looking for an experienced professional engineer with a proven track record of building not just projects but contacts and relationships. As a primary driver of business development, you'll exercise your talent for cultivating clients. Autonomy and flexibility are cornerstones of this firm that puts a premium on experience and respects work-life balance.

Position Summary:

- Plan and design civil engineering projects for a range of clients and industries
- Handle all aspects of civil engineering based on project needs, including scoping projects, creating engineered drawings, specifications, and reports; drafting site plans; performing site visits; and coordinating with contractors
- Manage and monitor projects from initial bid packets and presentations to schedules, budgets, materials, engineering specs, through to completion
- Generate and pursue business leads in the private and public sectors, cultivate ongoing relationships, and build networks of both clients and partners
- Work with clients from initial meeting and presentation through to project conclusion and act as liaison between client and Pilch team members
- Provide exceptional service including thorough, clear, and preemptive communication
- Work seamlessly with people across a project—clients, technical support staff, and contractors

Required Qualifications:

- 8+ years civil engineering experience, including several years of business development
- Licensed PE--ideal candidate will be licensed in Wyoming or eligible
- Bachelor's degree in engineering
- Skilled using AutoCAD and Microsoft Office, particularly Excel
- Skilled in bid process, including sourcing, applying, creating specs and budgets
- Background in construction projects from inception to completion
- Geotechnical experience a plus

Compensation: \$100,000-\$150,000 depending on experience. Medical, matching 401K, paid time off, paid holidays, continuing education offerings, and possible performance/management bonuses.

About Pilch Engineering:

Wyoming-based consulting engineering and geology firm established in 1968. We serve as an interface between the private sector and public administrative agencies on natural resource and environmental issues. We support clients on a variety of projects such as landfill engineering, geotechnical engineering, on-site wastewater systems, residential and commercial subdivision design, and environmental permitting. Our team also assists clients with geology needs including hydrogeology studies and investigations and groundwater monitoring.
